The legislation compare tool enables you to compare two versions of a legislative provision - marking up the differences. When viewing a provision with multiple versions (historic or prospective), you will now see a “Compare versions” button appearing on the right.

If you click this button you will then be able to select two versions to compare. Once you have selected two, the other versions will be greyed out and you can click the “Compare versions” button.

The tool will clearly show where text has been added (in green) or deleted (struck through in red).
